

Gold Rush Algo – MT5 Setup Guide

This guide will help you install, activate, and properly run **Gold Rush Algo** on MetaTrader 5.

Please follow all steps carefully.

1. Installation

1. Download the EA file: `goldrushalgo.ex5`
2. Open **MetaTrader 5**
3. Go to: **File → Open Data Folder**
4. Open: **MQL5 → Experts**
5. Paste `goldrushalgo.ex5` inside the **Experts** folder
6. Restart MT5

The EA will appear in: **Navigator → Expert Advisors**

2. Required Settings Before Attaching the EA

Enable Algo Trading

- Click **AutoTrading** button (it must be green)

Enable WebRequest (Required)

For the EA to communicate with the server:

1. Go to **Tools → Options**
 2. Select **Expert Advisors** tab
 3. Enable:
 4. ✓ *Allow Algo Trading*
 5. ✓ *Allow WebRequest for listed URL*
 6. Add this URL:
 7. `https://fpboyoopzshrklxltqoe.supabase.co`
 8. Click **OK**
 9. Restart MT5
-

3. Activating the EA

1. Open **XAUUSD** chart (⚠ EA supports only XAUUSD)
2. Any timeframe is fine — EA detects timeframe automatically
3. Drag **Gold Rush Algo** onto the chart
4. Go to **Inputs** tab
5. Paste your **License Key**
6. Press **OK**

Successful Activation Checklist

You should see an **information panel** showing: - Gold Rush logo - License information - Account details - Balance

If the panel shows correctly → EA is active

4. License Plan Rules

Elite Plan (1 Account License)

- The EA automatically **binds to the first MT5 account** you run it on

Ultra Plan (Up to 3 Accounts)

- Each new activation automatically binds a new account
- Max **3 accounts** per license

If you need to replace account(s): ➔ Login to the **Customer Portal**: <https://advancealgorithm.com/customer-portal.html>

Use **your email + license key** to manage your license accounts

5. How to Confirm the EA Is Working Correctly

After running the EA, it will automatically: - Draw **previous day's high & low levels** - Place **two pending orders**: - Buy Stop at previous day's High - Sell Stop at previous day's Low

Important

Pending orders may not appear **immediately**.

✓ If no pending orders → **wait up to 24 hours** ⛔ On **Saturday/Sunday** the market is closed → no orders will be placed

What to check if orders don't appear:

- Correct trading symbol (XAUUSD)
- License activated (info panel visible)
- WebRequest enabled
- AutoTrading enabled

If still no trades: 📺 Support: **contact@advancealgorithm.com**

6. How the Strategy Works

Gold Rush Algo uses a **previous-day breakout** method:

- If price touches previous day **High** → **Buy** triggers
- If price touches previous day **Low** → **Sell** triggers
- If price touches neither → **no trade for that day** (✓ normal)

The EA trades **one direction per day** only

7. Recommended Settings & Risk Management

You **do not need** to change default settings except:

Risk% for Lot Size

| Account Type | Maximum Suggested Risk |
|-----------------|-----------------------------------|
| Standard Broker | Up to 10% per trade |
| Prop Firm | Below daily drawdown limit |

Example: - Daily limit = 3% - Set EA risk = **2%**

Ensures safety under prop firm rules

8. Broker Timezone & Best Performance

Day High/Low levels depend on: - Broker **server timezone** - Trading session **start/end times**

Best performance found with: - **UTC+2 server time** - Day: **01:00 → 23:59**

These brokers have **highest win-rate** (tested): - **IC Markets** - **Exness**

Recommended Prop Firm: - **FTMO**

⚠ If your broker has different hours → results may vary

🎲 Always **backtest** before going live

If win-rate is low → simply **switch broker**

9. Quick Checklist

| Item | Status |
|--|--------|
| XAUUSD chart | ✓ |
| Info panel visible | ✓ |
| Pending orders placed (or pending within 24 hrs) | ✓ |
| WebRequest enabled | ✓ |
| AutoTrading ON | ✓ |

Final Notes

- EA runs automatically — do not modify pending orders
- Not trading some days is normal
- Performance depends on broker feed & timezone

If everything above is followed → **Gold Rush Algo works perfectly**

Happy Trading 🍀
